

## Software Developer (WEB/APPS) f/m/d

Hello Dear Applicants

We are looking for a **Software Developer** (f/m/d) to support our coding force team.

We are a young team of 12 developers and love projects that challenge us and demand innovative solutions. We live a flat hierarchy and support each other in all areas of responsibility.

At Campudus, you'll create web applications with state-of-the-art architectures. You'll work on large digital customer projects as well as in the heart of our own products and tools. Together, we digitize the business and consumer world across multiple platforms, including web, mobile, tablets and interactive POS systems.

Send us your application straightforward and without any frills to **Max Stemplinger** [[recruit\(at\)campudus.com](mailto:recruit(at)campudus.com)].

### Your Responsibilities

Playing an important role in our development team, you'll help us with:

- Conception and deployment of unique web and mobile applications
- Development of innovative software solutions for the digital transformation of our customers
- Development of technical solutions that enable you and the team to advance each other's business

Optional: You'll help us to develop modern interface concepts for the connection of internal and external systems/ microservices

## Your Qualifications

**"Do what you do best!"** - We believe that qualifications are important, but your interest and passion for software development are the things that define you. We'll put your skills to work where you are strong.

- Successfully graduated in computer science or comparable education
- Profound experience in architecture and programming of web applications in the frontend and/ or backend area
- Experience with web techniques such as HTML, CSS, JavaScript, React or Node.js
- You speak English fluently, German is a plus.

## Your Add-Ons & Power-Ups

Additional skills that will prepare you best for the job, but are not mandatory to make you a good fit for us.

- Knowledge of modern software architectures (Reactive Software Design)
- Confident handling of relational databases such as PostgreSQL
- First work experience with automated testing and testing frameworks
- First steps in the development of RESTful Services
- You are open to new technologies and keen to improve yourself further

## Our Benefits

- The opportunity to play a significant role in shaping the success of the entire team
- We develop products that inspire our customers and ourselves
- A dynamic, motivated and familiar team
- Best espresso and coffee thanks to our portafilter machine
- A workplace with high-quality, ergonomic equipment and a nice location
- Latest and self-selected hardware
- Flexible working hours and work arrangements (home office)
- High-quality bikes and latest eBikes at favorable conditions
- Attend meetups, congresses or coding camps for your personal development

Type of position: Full-time, unlimited

OFFLINE MODE

## Our Stack

- Design Tools: Sketch, Adobe CC, Figma, Flinto
- Languages: JavaScript, TypeScript, Scala, PHP
- Frontend: React, Redux, Lodash, Webpack
- Backend: NodeJS or Vert.x
- Shopsystems: Shopware 5/6, Vendure, Shopify
- Database: PostgreSQL, MySQL, Elasticsearch
- Build Tools: Jenkins, Webpack, Gulp, Gradle
- Infrastructure: Cloud Server (Ubuntu, Debian), Docker, NGINX, Let's Encrypt, Sentry
- Development: IntelliJ IDEA, BitBucket, GitHub, Confluence, Scrum, Pull Request Reviews
